

♥ CPR Pen™

Carry the CPR Pen & Be Prepared to Safely Resuscitate Anywhere & Anytime

The Mouth-to-Mouth Protector is an approved Class I device with features that include:

- Latex free 8"x 8" plastic shield to prevent direct mouth, nose and face contact with the victim
- Printed land marks and instructions on how to use it to deliver breaths
- Hydrophobic protective filter over the breathing hole to help prevent contact with a victim's saliva or blood
- Sterile plastic packaging

The pen itself is a quality writing device manufactured with durable metal barrels. Having a quality pen is important to encourage users to make it their pen of choice. This helps ensure "protection" is available when needed. Ink refills are also available.

Almost everyone carries a pen.
Make it the CPR Pen and ...
Be ready to take notes and SAFELY resuscitate.
